

# Luxmikant

Software Development Intern — 2026 Graduate

✉ [kantgarg2254@gmail.com](mailto:kantgarg2254@gmail.com) — 📞 7018209392 — 🌐 [Portfolio](#) — 🐙 [github.com/luxmikant](https://github.com/luxmikant) — 💼 [linkedin.com/in/luxmikant](https://linkedin.com/in/luxmikant)

## Professional Summary

Computer Science undergraduate focused on full-stack development and scalable Backend . Experienced in building production-ready applications with modern frameworks, implementing AI-powered solutions, and deploying containerized microservices for real-world impact.

## Education

Vellore Institute of Technology

B.Tech in Computer Science Engineering

2022 – 2026

CGPA: 8.38

## Technical Skills

- **Languages:** Python, JavaScript, C++, Golang.
- **Frameworks:** React.js, Node.js, Express, Django, FastAPI, GIN, GORM.
- **AI/ML:** LangChain, LangSmith , Transformer, RAG Architecture, Pandas, NumPy, scikit-learn.
- **Databases:** PostgreSQL, MongoDB, Redis, ChromaDB.
- **DevOps & Cloud:** Docker, Kubernetes, AWS, Git/GitHub, CI/CD.
- **Tools & Monitoring:** REST APIs, Microservices, New Relic, Datadog.

## Projects

### TraderLens-AI — Financial NLP Insights Platform

🐙 [GitHub](#) — [Live Demo](#)

**Tech Stack:** Python, FastAPI, LangChain, ChromaDB, FinBERT, Groq, TypeScript, React

*AI-powered platform that converts financial news into structured, explainable market insights.*

- Used Sentence-Transformers (all-mpnet-base-v2) embedding model with cosine similarity in ChromaDB for semantic search and retrieval.
- Implemented Hybrid Vector RAG (retrieve-then-generate) combining embedding-based retrieval with metadata filtering, followed by LLM-based answer synthesis from top-k results.
- Evaluated system performance using precision , recall, and latency metrics, along with confidence calibration.

### SharCRM — Multi-Tenant CRM Application

🐙 [GitHub](#) — [Live Demo](#)

**Tech Stack:** MongoDB, Express, Node.js, React, JWT, Gemini AI

*Secure multi-tenant CRM with AI-assisted workflows and role-based access control.*

- Developed multi-tenant architecture with JWT authentication and role-based authorization ensuring org-level data isolation.
- Built scalable REST APIs with input validation, rate limiting, and comprehensive error handling supporting concurrent workloads.
- Integrated Gemini AI for automated message drafting, reducing campaign creation time by 60% through prompt engineering.

### Connect4 — Real-Time Multiplayer Game

🐙 [GitHub](#) — [Live Demo](#)

**Tech Stack:** Go, TypeScript, React, PostgreSQL, Redis, Apache Kafka, WebSockets

*Real-time multiplayer game with live gameplay, AI opponent support, and async analytics.*

- Engineered a real-time game server with WebSockets, async state handling, and secure room/session lifecycle management.
- Implemented Minimax with alpha-beta pruning and added 130+ tests for core logic, edge cases, and invalid transitions.
- Built an event-driven analytics pipeline with Kafka and Redis, plus cron-based jobs for periodic aggregation of gameplay metrics.

## Achievements

- **Codeforces Specialist (Max 1496):** Solved 600+ algorithmic problems demonstrating DSA proficiency and problem-solving skills.
- **Top 10 Finalist, HackByte 3.0:** Selected among 100+ teams for building and deploying a production-grade analytics solution.
- **Research Publication (Springer Nature):** Co-authored CNN-based Alzheimer's detection study achieving 92% accuracy.

## Certifications

- GitHub Foundation Certification
- MongoDB Node.js Developer
